7. TEST MODE

The SSP-1 has a test mode for checking numerous functions. When the test mode is activated, the SSP-1 internal data is initialized. Hence, if it contains any necessary data, save this data beforehand in a RAM card or a MIDI data filer or other memory device. The figure below shows the equipment and settings required for carrying out tests.

★ Standard Setting

Oscilloscope : Time division 1ms/div
Voltage range 2V

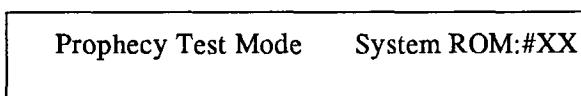

★ Operating Specifications for Test Mode

※ Carry out RIBBON, WHEEL, and AFTERTOUCH calibration in the test mode.
When you activate the test mode, always run all the tests.
In addition, when an electronic part (such as volume, etc.) that falls
on one of the above-mentioned is replaced, activate the test mode and carry out
all the tests.

- Turning the power ON while pressing one of the following switches activates
the test mode:

WHEEL 3 HOLD + PATTERN DEFINE	: Ordinary test mode
WHEEL 3 HOLD + OCTAVE	: Test mode excluding the MIDI and CARD test
WHEEL 3 HOLD + LATCH	: Test mode excluding the MIDI test
WHEEL 3 HOLD + PORTAMENTO	: Test mode excluding the CARD test

- When the test mode is activated, the opening screen is displayed for approx. 2 seconds:

XX : ROM version number

- Switches to be used in test mode:

[PAT5] (or VALUE +)	: Go to the next test step
[VALUE -]	: Return to the preceding test step
[PAGE UP]	: Go to the next test item
[PAGE DOWN]	: Return to the preceding test item

- You can specify a test item directly by using the following switches:

[COMPARE]	LED&SW test
[(-)]	VR test
[0]	WHEEL test
[1]	RIBBON test
[2]	PEDAL test
[3]	LCD indication test
[4]	DSP test
[5]	Maximum output level test
[6]	Residual noise test
[7]	Keyboard test
[8]	Preload

※ This test mode is compatible with ROM version #16 onward.

☆Activating the Test Mode

- Make connections as described in SETUP section.
[WHEEL 3 HOLD] and [PATTERN DEFINE] switches.
When the test mode is activated, internal tests follow automatically.

- LCD screen at the Test Mode activation

Prophecy Test Mode SystemROM:#XX

XX : ROM version number

- Screen to be displayed upon normal completion of all the internal tests

1 LED&SW TEST
LED(ALL) BATTERY=n.nnV

n.nn : INTERNAL BATTERY voltage

☆Internal Tests

①MIDI test

- Connect IN and OUT of MIDI and check that the transmitted and received data are correct.
If any abnormality is detected, the following indication appears to the LCD screen:
 - Error message for being unable to receive data

MIDI TEST
TIME OUT ERROR

- Error message for abnormal data received

MIDI TEST
DATA ERROR

②CPU communication test

- Run the V55, H8 communication line test.

If any abnormality is detected, the following indication appears to the LCD screen:

- Error message for both H8 and V55 being unable to transmit/receive data

CPU CONNECTION TEST
H8>>V55 CONNECTION ERROR

- Error message for failing to receive data from H8

CPU CONNECTION TEST
H8>>V55 TIME OUT ERROR

- Error message for abnormal data received from V55

CPU CONNECTION TEST
V55>>H8 DATA ERROR

- Error message for failing to receive data from V55

CPU CONNECTION TEST
V55>>H8TIMEOUTERROR

③ROM checksum test

- Test each ROM connected to V55 and H8.

1) Run the checksum test of the ROM for V55.

If any abnormality is detected, the following indication appears to the LCD screen:

- Error message for abnormal ROM data for V55

ROM TEST
V55 CHECKSUM ERROR

2) Run the checksum test of the ROM for H8.

If any abnormality is detected, the following indication appears to the LCD screen:

- Error message for abnormal ROM data for H8

ROM TEST
V8 CHECKSUM ERROR

④SRAM write/read test

- Run the Write/Read test of the RAM each connected to V55 and H8.

1) Run the Write/Read test of the RAM for V55.

If any abnormality is detected, the following indication appears to the LCD screen:

- Error message for abnormal RAM data for V55

SRAM TEST
V55 DATA ERROR

2) Run the Write/Read test of the RAM for H8.

If any abnormality is detected, the following indication appears to the LCD screen:

- Error message for abnormal RAM data for H8

SRAM TEST
H8 DATA ERROR

⑥DSP initializing test

- Run the DSP initializing and DRAM tests.

1) Run the DSP1 initializing and DRAM tests.

If any abnormality is detected, the following indication appears to the LCD screen:

- Error message for abnormality in the DSP1 initialization and DRAM tests

DSP TEST

DSP1 ERROR

2) Check the DSP2 initialization.

If any abnormality is detected, the following indication appears to the LCD screen:

- Error message for abnormality in the DSP2 initialization and DRAM checking

DSP TEST

DSP2 ERROR

3) Check the DSP3 initialization and DRAM.

If any abnormality is detected, the following indication appears to the LCD screen:

- Error message for abnormality in the DSP3 initialization and DRAM checking

DSP TEST

DSP3 ERROR

⑥LCD RAM write/read test

- Run the LCD RAM write/read tests.

If any abnormality is detected, the following indication appears to the LCD screen:

- Error message for abnormality in the LCD RAM checking

LCD RAM TEST

DATA ERROR

⑦RAM CARD test

- Check the RAM CARD Write/Read and the battery terminal.

If any abnormality is detected, the following indication appears to the LCD screen:

- Error message for no insertion of the RAM card

CARD TEST

NO CARD ERROR

- Error message for the insertion of the RAM card formatted with a different product

CARD TEST	ILLEGAL CARD ERROR
-----------	--------------------

- Error message for the RAM card WRITE PROTECT SW being turned ON

CARD TEST	WRITE PROTECTED
-----------	-----------------

- Error message for incorrect result of data Write/Read

CARD TEST	WR/RD ERROR
-----------	-------------

- Error message for no battery in RAM card

CARD TEST	NO BATTERY
-----------	------------

⑧INTERNAL BATTERY test

- Check the internal battery.

If any abnormality is detected, the following indication appears to the LCD screen:

- Error message for the voltage being under 3.0 V

INTERNAL BATTERY TEST	BATTERY LOW
-----------------------	-------------

- Error message for the voltage being over 3.6 V

INTERNAL BATTERY TEST	BATTERY HI
-----------------------	------------

☆External Tests

①LED&SW test

- 1) Check that all LEDs are lit.

1 LED&SW TEST	LED(ALL)	BATTERY=n.nnV
---------------	----------	---------------

When checked, press [PAT5] switch.

- 2) Run the switch and LED test in the sequence as indicated on the LCD screen.
for the switches and the corresponding LEDs.

See Table 1

1 LED&SW TEST
ARPEGGIO ON/OFF

switch name

If several switches are turned ON simultaneously, a switch name under checking and the bit data of a switch actually turned ON will be indicated.

1 LED&SW TEST
nnnnnnnnnnnnnnnnn020000000000

switch name bit data

When all the SW tests are completed, proceed to the following test.

Table 1 List of switches and corresponding LEDs

No.	Switch name	LED	No.	Switch name	LED
1	ARPEGGIO ON/OFF	SW	24	A	SW
2	PATTERN DEFINE	SW	25	B	SW
3	OCTAVE	4	26	CARD	SW
4	OCTAVE	3	27	INT PAT	SW
5	OCTAVE	2	28	CARDPAT	SW
6	LATCH/KEY SYNC	LATCH&K.S.	29	PE1	SW
7	LATCH/KEY SYNC	KEYSYNC	30	PE2	SW
8	LATCH/KEY SYNC	LATCH	31	PE3	SW
9	WHEEL 3 HOLD	SW	32	PE4	SW
10	PORTAMENTO	SW	33	PE DEFINE	SW
11	OCTAVE DOWN	SW	34	COMPARE	SW
12	OCTAVEUP	SW	35	(PROG/PATSELECT)	
13	PAGE DOWN	SPEED	36	(PROG/PATSELECT)	(-)
14	PAGEUP		37	0	A
15	CURSOR<		38	1	B
16	CURSOR>		39	2	CARD
17	VALUE -		40	3	INT PAT
18	VALUE +		41	4	CARDPAT
19	ENTER	SW	42	5	PE1
20	EXIT		43	6	PE2
21	WRITE	SW	44	7	PE3
22	(PERFORM/EDIT)	(UPPER)	45	8	PE4
23	(PERFORM/EDIT)	(LOWER)	46	9	PE DEFINE

②VR test

- Check VR in the order of [SPEED], [1], [2], [3], [4] and [5].

Turn each VR, check the variation from 00 to 7FH, and move on to the following VR test.

- Indication of SPEED VR 1

2 VR TEST SPEED1 2 3 4 5
OK *7F xx xx xx xx

③WHEEL test

※ Make calibration of WHEEL in this test.

When the test mode is activated or VR of the WHEEL is replaced, always run this test.

1) Run the center test of WHEEL1.

Check that no error occurs when the center is shifted within the limit of its play.
If no error occurs, press "PAT5" SW to determine MIN and MAX values for the center
and proceed to the following step.

Should you make an operation error, press VALUE again for re-checking.

2) Run the MIN and MAX checking of WHEEL1.

Move the WHEEL in the direction of MIN and MAX and check that OK appears.

When OK appears, press "PAT5" SW to determine MIN and MAX values and proceed
to the following step.

3) Run the MIN and MAX checking of WHEEL2.

Move the WHEEL in the direction of MIN and MAX and check that OK appears.

When OK appears, press "PAT5" SW to determine MIN and MAX values and proceed
to the following step.

4) Run the center check of WHEEL3.

Check that no error occurs when the center is shifted within the limit of its play.
If no error occurs, press "PAT5" SW to determine MIN and MAX values for the center
and proceed to the following step.

5) Run the MIN and MAX checking of WHEEL3.

Move the WHEEL in the direction of MIN and MAX and check that OK appears.

When OK appears, press "PAT5" SW to determine MIN and MAX values and proceed
to the following check item.

- Indication of the center being within a prescribed range
as the result of WHEEL1 center check

3WHEELTEST	WHEEL1	WHEEL2	WHEEL3
3F	→←	xx	xx

- Indication of the center being outside a prescribed range
as the result of WHEEL1 center check

3WHEELTEST	WHEEL1	WHEEL2	WHEEL3
41Err	xx	xx	

- Indication of the wheel being within a prescribed range
as the result of WHEEL1 MIN, MAX check

3WHEELTEST	WHEEL1	WHEEL2	WHEEL3
00	↔	xx	xx

- Indication of the wheel being within a prescribed range
as the result of WHEEL1 MIN, MAX check

3WHEELTEST	WHEEL1	WHEEL2	WHEEL3
7F	OK	xx	xx

④ RIBBON test

- ※ Make calibration of RIBBON controller in this test.
When the test mode is activated or X-Z SENSOR is replaced, always run this test.

1) Check X axis of RIBBON.

Place your finger tip to the ribbon and move it to the left and right and check that OK appears.

Check that the bar graph in the LCD screen moves smoothly without being interrupted. When you lift the finger, check that the bar is in the center area of the screen.

- Indication when the finger slides in the left hand direction

4 RIBBON-X TEST X:7F Z:xx

- Indication when the finger slides in the right hand direction and passes the test

4 RIBBON-X TEST X:00 OK Z:xx

- Indication when the finger is lifted from the ribbon

4 RIBBON-X TEST X:xx OK Z:xx

When OK appears, press "PAT5" SW to determine MIN and MAX values and proceed to the following step.

2) Check Z axis of RIBBON.

Fully turn RIBBON SENS on the rear panel clockwise as seen from behind.

Check that Z:OK appears and the bar graph moves smoothly when you press the left hand end of the ribbon.

3) Check that Z:7F appears wh

while pressing the ribbon.

4, Press the right hand end of the Resson and check that it is under 50m.

5) Fully turn RIBBON SENS on the rear panel counter-clockwise as seen from check that

- or Z slows down (Z not becoming AMI easily).

• Indication when the ribbon is not pressed with finger

- Indication when the ribbon is not pressed

- Indication when the ribbon is not pressed with finger

4 RIBBON-Z TEST Z:00 (X:01)

- Indication when the right hand end of the ribbon is pressed with finger

4 RIBBON-Z TEST Z:00 (X:01)

Upon completion of the checking, press "PAT5" SW to determine MIN and MAX values and proceed to the following test item.

⑤PEDAL test(EC5, FOOT SW, FOOT PEDAL)

Check EC5(A,B,C,D,E), FOOT SW, and FOOT PEDAL.
Check ON-OFF on all the pedals and see they are OK.

- Indication when FOOT PEDAL is OK

5 PEDAL	EC1	EC2	EC3	EC4	EC5	FSW	FPDL
OK	OK	OK	OK	OK	OK	OK	7FOK

Upon completion of the checking, press "PAT5" SW and proceed to the following step.

⑥LCD indication test

- 1) All the dots on the LCD are indicated.
Check that no missing dots are present.

Upon completion of the checking, press "PAT5" SW and proceed to the following step.

- 2) Dots on the LCD are all erased.
Check that no residual dots are present.

Upon completion of the checking, press "PAT5" SW and proceed to the following test item.

⑦DSP test

※ Measure the MASTER VOLUME in MAX state.
Measure it with the plug inserted to OUTPUT L,R, PHONES.

- 1) Check the DSP3(IC32) test waveform (Fig. 1) using an oscilloscope.
Output this waveform by oscillating DSP3.

7 DSP WAVEFORM TEST
[DSP3] DSP2 DSP1 DRAM3 DRAM1

- 2) Check the DSP2(IC36) test waveform (Fig. 2) using the oscilloscope.
Output this waveform through DSP3 by oscillating DSP2.

7 DSP WAVEFORM TEST
DSP3 [DSP2] DSP1 DRAM3 DRAM1

- 3) Check the DSP1 (IC35) test waveform (Fig. 3) using the oscilloscope.
Output this waveform through DSP2 and DSP3 by oscillating DSP1.

7 DSP WAVEFORM TEST
DSP3 DSP2 [DSP1] DRAM3 DRAM1

- 4) Check the DRAM3 (IC30, 31) test waveform (Fig. 4) using the oscilloscope.
This output waveform is oscillated using DSP1(IC35) and DRAM(IC33, 34) and effected by DSP3(IC32) and DRAM(30, 31).

Waveform should stabilize after several times of disturbance.
To check the waveform, observe it for 2 sec and over.

7 DSP WAVEFORM TEST
DSP3 DSP2 DSP1 [DRAM3] DRAM1

- 5) Check the DRAM1 (IC33,34) test waveform (Fig. 5) using the oscilloscope.
This output waveform is oscillated using DSP1(IC35) and DRAM(IC33,34).

To check the waveform, observe it for 2 sec and over.

7 DSP WAVEFORM TEST
DSP3 DSP2 DSP1 DRAM3 [DRAM1]

⑧ Maximum output level test

※ Measure the MASTER VOLUME in MAX state.

Measure it with the plug inserted to OUTPUT L,R, and PHONES. Apply a load of 33 ohms to the phones for measurement.

Audio analyzer: LPF=80kHz ON

8 MAX LEVEL TEST
[L] R PHL PHR

[] represents a selected output.

- Measure the MAX level of OUTPUT L.
- Check that the output signal level and frequency are within the prescribed ranges in the table below.
- Observe sine waves only (Fig. 6).
- Press [PAT5] to check OUTPUT L, PHONE L, and PHONE R same way.

Prescribed range of output level

outputs	signal level	freq.
OUTPUTL	8.0~9.5dBu	488Hz
OUTPUTR	8.0~9.5dBu	412Hz
PHONE L	5.5~7.0dBu	735Hz
PHONER	5.5~7.0dBu	610Hz

⑨Residual noise test

- ※ Measure the MASTER VOLUME in MAX state.
Measure it with the plug inserted to OUTPUT L,R, and PHONES.
Apply a load of 33 ohms to the phones for measurement.
Audio analyzer: LPF=20kHz, PSOPHO=A

9 NOISE TEST
[L] R PHL PHR

[] represents a selected output.

- Check that the output signal level is within the prescribed range in the table below.
- Press [PAT5] to check OUTPUT L, PHONE L, and PHONE R same way.

Prescribed ranges of residual noise level

outputs	signal level
OUTPUTL	less than -93.0dBu
OUTPUTR	less than -93.0dBu
PHONE L	less than -94.0dBu
PHONE R	less than -94.0dBu

⑩Keyboard test

- ※ Make calibration of the after-touch in this test.
Always run this test when the test mode is activated or an after-touch sensor is replaced.

- Press all the keys from C6 to C3 sequentially to check velocity.
If the velocity is between 2B4 and 49H, proceed to the testing of the following key.

- Indication of a correctly pressed key

10 KEYBOARD TEST
KEY = C6 VERO = 40

- Indication of multiple keys turned ON simultaneously

10 KEYBOARD TEST MK:0801000000
KEY=B5 VERO=3E BK:0801000000

- Indication of a key whose velocity is outside a prescribed range or when any wrong key is pressed

10 KEYBOARD TEST
KEY = VERO = Err:A5 08

Upon completing the pressing of all the keys, proceed to the AFTERTOUCH test.

2) Press C3 and C6 and check that AFTERTOUCH is effective and the value is indicated between 00 to 7FH.

- LCD indication for a maximum after-touch value

10 KEYBOARD TEST AFTERTOUCH=7F
□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□

- LCD indication when AFTERTOUCH is not effective

10 KEYBOARD TEST AFTERTOUCH=00
□

Upon completion of the checking, press "PAT5" SW to determine MIN and MAX values and proceed to the following test item.

⑪Preload

Press "PAT5" SW to effect preloading.

11PRELOAD

Upon completion of preload, check the data and end the test.

★ Supplement

1. Aftertouch Calibration

※ After finishing the test mode, execute this calibration by all means.

- ① After confirming the preload, press [PERFORM/EDIT] to enter the edit mode.
([PERFORM/EDIT] is located at the right side of [WRITE].)
The lower part of LEDs, which are located at the upper side of [PERFORM/EDIT]
go on and off.
- ② Press [GLOBAL] to light up GLOBAL LED.
- ③ Press [PAGE LEFT] so that the LCD indicates the following.

◀GLB-22[Controller Calibration]
WHEEL1 L← * →H <Min&Max OK?>

- ④ Press [VALUE+] five times so that the LCD indicates the following.

◀GLB-22[Controller Calibration]
AftTouch L← * →H <Min&Max OK?>

- ⑤ The indication '*' at 'AftTouch L← * →H' in the LCD should be three or four pieces.
To get this result, press any key properly.
The excess press might cause more than 5 pcs. of the indication '*'.
In this case press [EXIT] and start again.

◀GLB-22[Controller Calibration]
AftTouch L← *** →H <Min&Max OK?>

- ⑥ After finishing the adjustment, press [ENTER].
The LCD indicates the following.

◀GLB-22[Controller Calibration]
AftTouch L← *** →H <Are you sure?>

When the excess press causes more than 5 pcs. of the indication '*',
press [EXIT] and execute ⑤ again.
If it is OK, press [ENTER].
The LCD indicates the following.

◀GLB-22[Controller Calibration]
AftTouch L← *** →H <Completed >

- ⑦ Press [PERFORM/EDIT] and select 'A03:Trumpet! →Wh1'.
Press any key and confirm that the aftertouch functions properly.

TMS57002(DSP) PIN ASSIGNMENT

TMS57002(DSP) PIN FUNCTIONS

PIN NAME	I/O	FUNCTION
VCC1, VCC2	---	+5V supply pins
VSS1, VSS2	---	Ground pins
CLKIN	I	System clock input
SYNC	I	System synchronization signal
SYPOL	I	Polarity select of SYNC active edge
SI0, SI1	I	S-port data receive input pins
SO0, SO1	O	S-port data transmit output pins
BCKI	I	Bit clock for Input S-ports
BCKO	I	Bit clock for Output S-ports
LRCKI	I	L/R channel indication signal for Input S-ports
LRCKO	I	L/R channel indication signal for Output S-ports
D(7-0)	I/O	8bit data input and output of P-port
STRB	I	Data Strobe input for P-port
WR	I	Write control signal input for P-port
EMPTY	O	Indicate P-port input buffer empty condition
CS	I	Chip select for P-port enable
PLOAD	I	Program data load control signal for P-port
CLOAD	I	Coefficient data background update request
BIO	I	Branch control signal
MUTE	I	Mute serial port signal
OVFM	O	Overflow detect signal on multiplier accumulator
OVFA	O	Overflow detect signal on ALU accumulator
RS	I	Hardware reset signal
PCO	O	Output Program Counter 0 state for sync clock
CLKSEL	I	Select signal of clock rate
TEST (0-4)	I	Device test control signals
RES	---	Reserved for future external DRAM interface

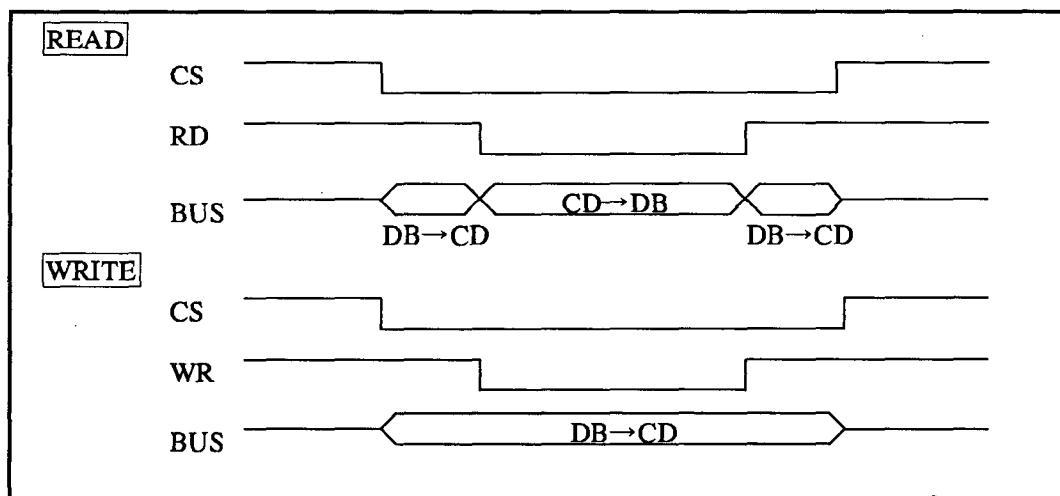

uPD65612-015-3BE (CBR92) PIN ASSIGNMENT

uPD65612-015-3BE (CBR92) PIN FUNCTIONS

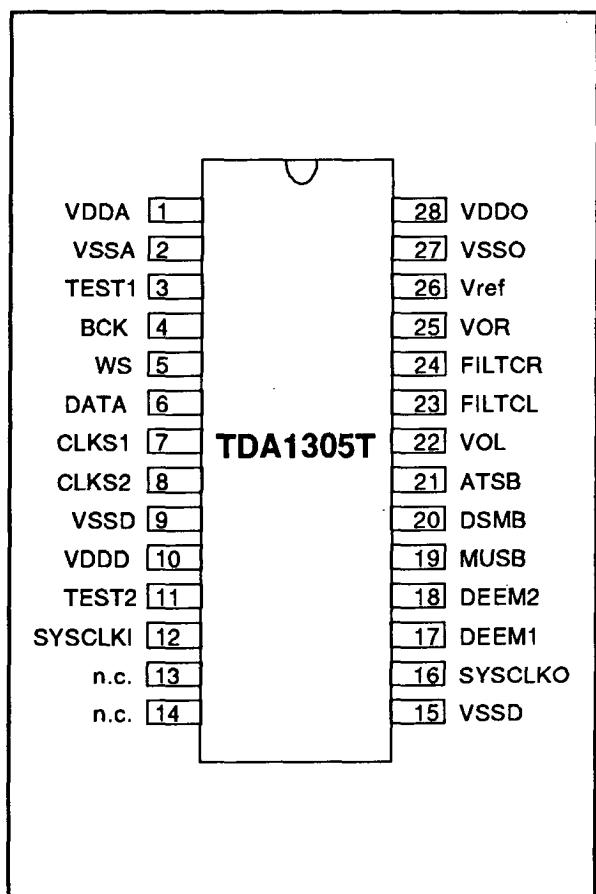

PIN NAME	I/O	FUNCTION
A16-0	I	ADDRESS INPUT
CS	I	CHIP SELECT INPUT
RD	I	READ STROBE INPUT
WR	I	WRITE STROBE INPUT
CCE	O	CARD CHIP SELECT OUTPUT
COE	O	CARD OUTPUT ENABLE
CAF-0(CA16-0)	O	CARD ADDRESS OUTPUT
DB7-0	I/O	CPU DATA BUS
CD7-0	I/O	CARD DATA BUS

uPD65612-015-3BE(CBR92) TIMMING CHART

TDA1305T(DAC) PIN FUNCTIONS

SYMBOL	PIN	FUNCTION
VDDA	1	analog supply voltage
VSSA	2	analog ground
TEST1	3	test input; pin should be connected to ground (internal pull-down resistor)
BCK	4	bit clock input
WS	5	word select input
DATA	6	data input
CLKS1	7	clock selection 1 input
CLKS2	8	clock selection 2 input
VSSD	9	digital ground
VDDD	10	digital supply voltage
TEST2	11	test input; pin should be connected to ground (internal pull-down resistor)
SYSCLKI	12	system clock input
n.c.	13	not connected (this pin should be left open-circuit)
n.c.	14	not connected (this pin should be left open-circuit)
VSSD	15	digital ground
SYSCLKO	16	system clock output
DEEM1	17	de-emphasis on/off; fDEEM 32kHz, 44kHz and 48kHz
DEEM2	18	de-emphasis on/off; fDEEM 32kHz, 44kHz and 48kHz
MUSB	19	mute input (active LOW)
DSMB	20	double-speed mode input (active LOW)
ATSB	21	12 dB attenuation input (active LOW)
VOL	22	left channel output
FILTCL	23	capacitor for left channel 1st order filter function should be connected between pins 22 and 23
FILTCR	23	capacitor for right channel 1st order filter function should be connected between pins 25 and 24
VOR	25	right channel output
VREF	26	internal reference voltage for output channels (0.5VDD)
VSSO	27	operational amplifier ground
VDDO	28	operational amplifier supply voltage

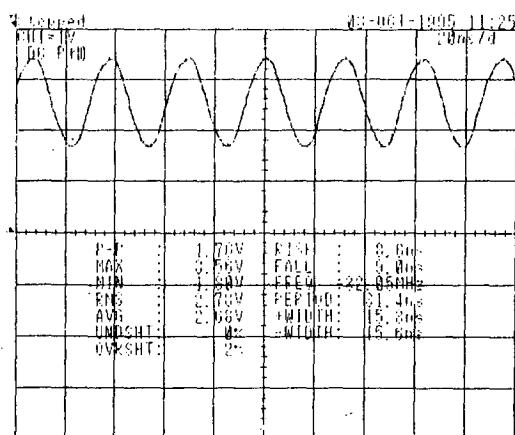

CHECK POINTS

1. CLOCK CIRCUIT - MPU(V55PI)

From X1
To 11pin(X1) and 12pin(X2) of IC4

f=32.00MHz

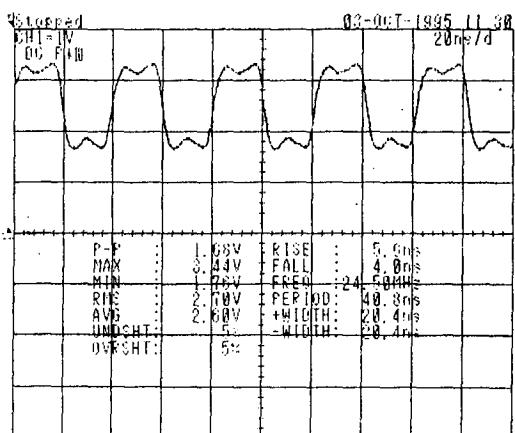

2. CLOCK CIRCUIT - CPU(H8/3003)/DSPs - CLOCK GENERATOR

From 2pin of IC29
To 74pin(EXTAL) of IC28,
10pin(CLOCK) of IC27,
11pin(CLKIN) of IC32, 35, 36

f=24.576MHz

signal name : 512FS

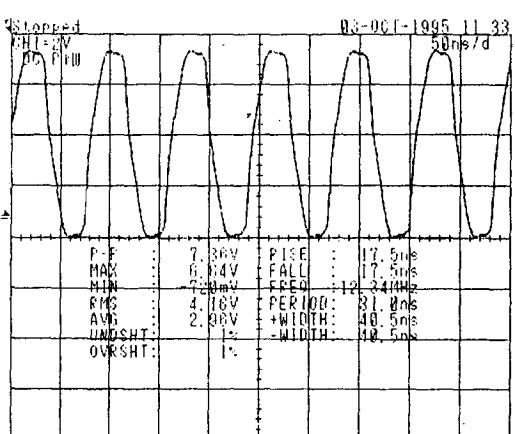

3. CLOCK GENERATOR - DAC

From 9pin(Q1) of IC27
To 6pin(SYSCLK) of IC15

f=12.34MHz

signal name : 256FS

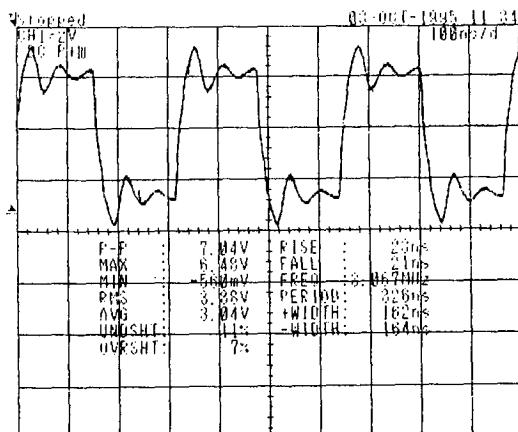

4. CLOCK GENERATOR - DSPs

From 6pin(Q3) of IC27
To 2pin(BCKO) and 75pin(BCKI)
of IC32, IC35 and IC36

f=3.06MHz

signal name : 64FS

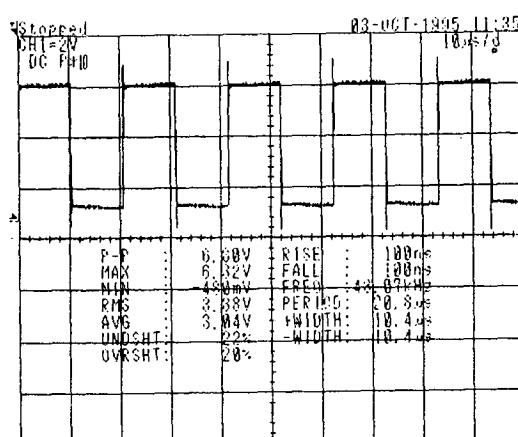

5. CLOCK GENERATOR - DSPs

From 12pin(Q9) of IC27
To 80pin(SYNC) of IC32, 35 and 36

f=48.00KHz

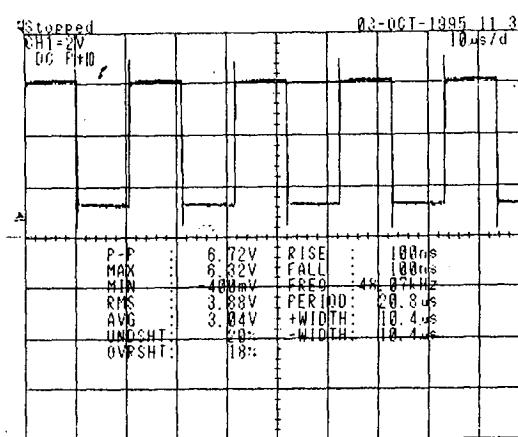

signal name : FS

6. BIT CLOCK GENERATOR - DAC

From 8pin(Q) of IC24
To 5pin(LRCK) of IC15

f=48.00KHz

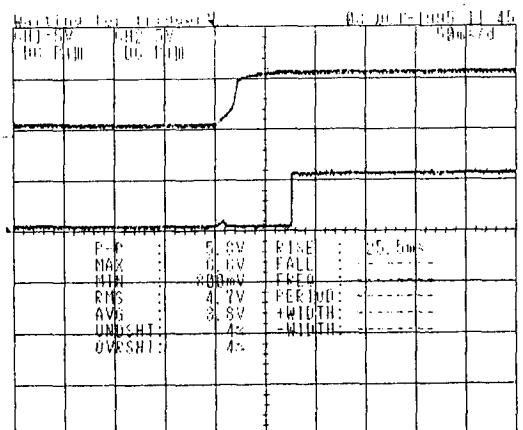

7. RESET CIRCUIT - MPU/SRAMs

From 7pin(RES) of IC21
To 8pin(RESET) of IC4
and 30pin(CE2) of IC9, IC10

※ When turn the power on

1ch : +5V power supply
2ch : RESET

signal name : SYSRES

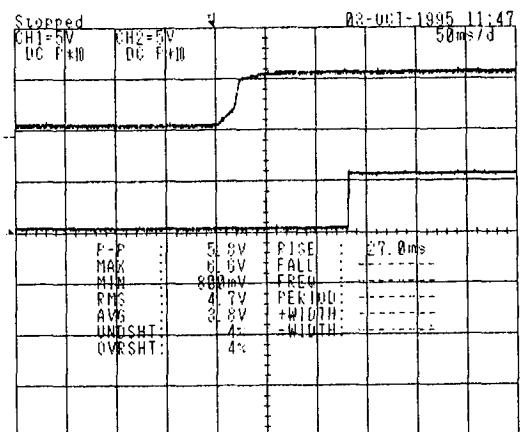

8. MPU(V55PI) - CPU(H8/3003)

From 43pin(SCK1) of IC4
To 71pin(RES) of IC28

※ When turn the power on

1ch : +5V power supply
2ch : RESET

signal name : H8RES

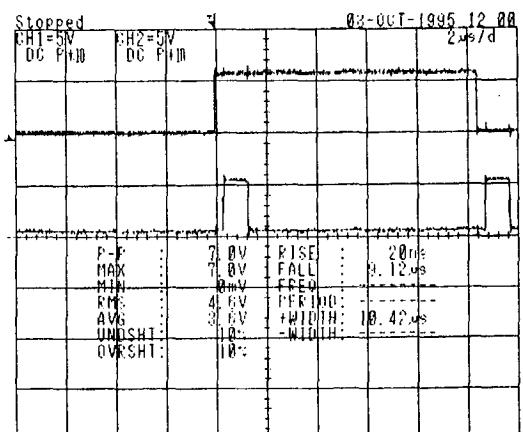

9. DSP3 - DAC

From 6pin(SO0) of IC32
To 6pin(DATA) of IC15

※ When DSP3 waveform test

1ch : L/R clock
2ch : Serial data

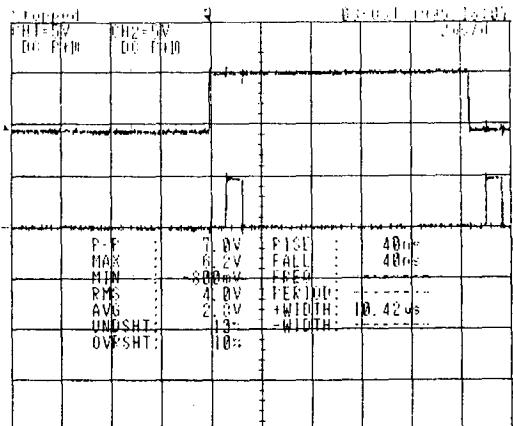

10. DSP2 - DSP3

From 6pin(SO0) of IC36
To 78pin(SI0) of IC32

※ When DSP2 waveform test

1ch : L/R clock

2ch : serial data

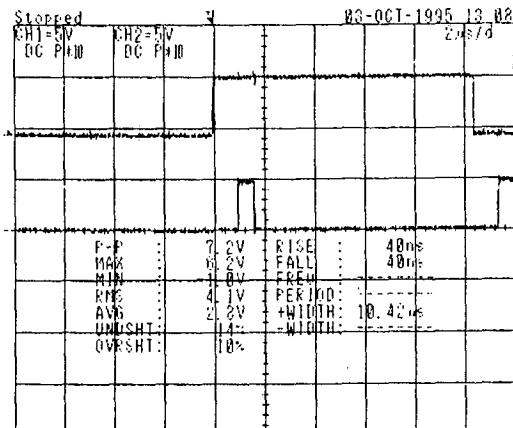

11. DSP1 - DSP3

From 6pin(SO0) of IC35
To 78pin(SI0) of IC36

※ When DSP1 waveform test

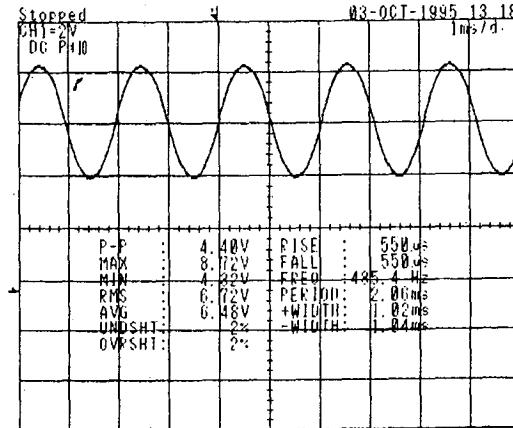

1ch : L/R clock
2ch : Serial data

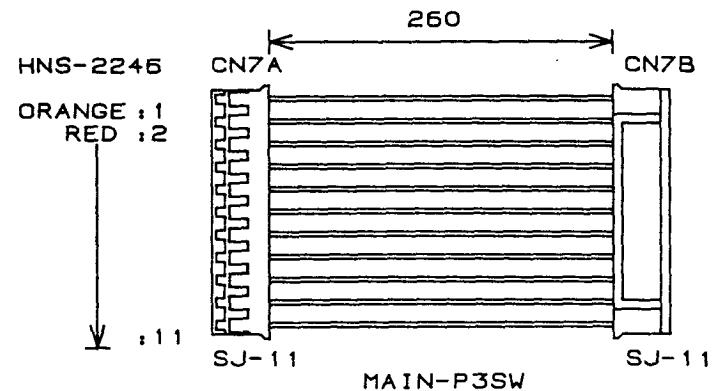

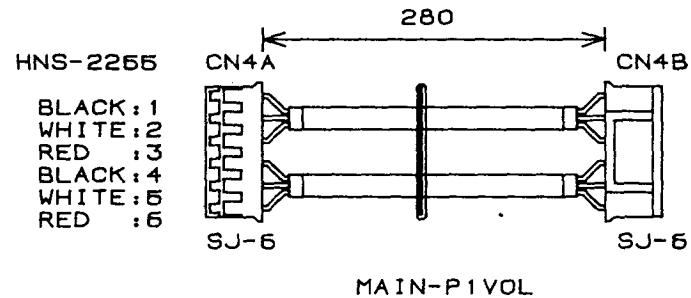

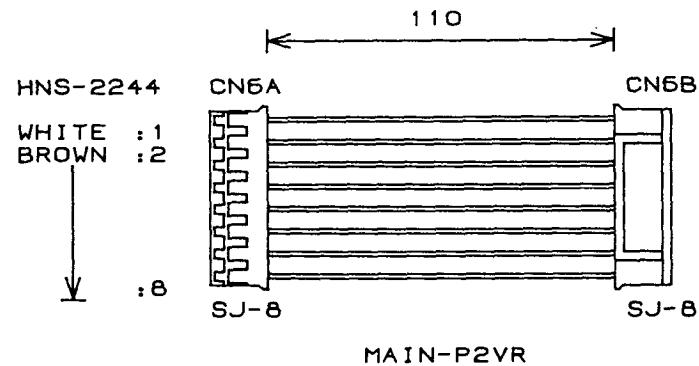

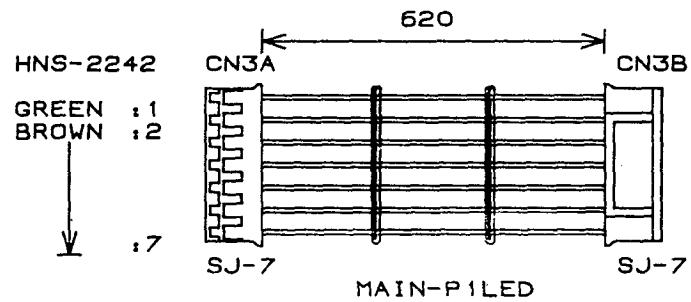

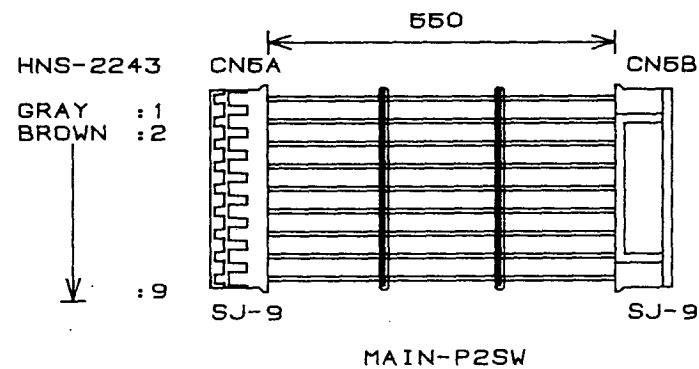

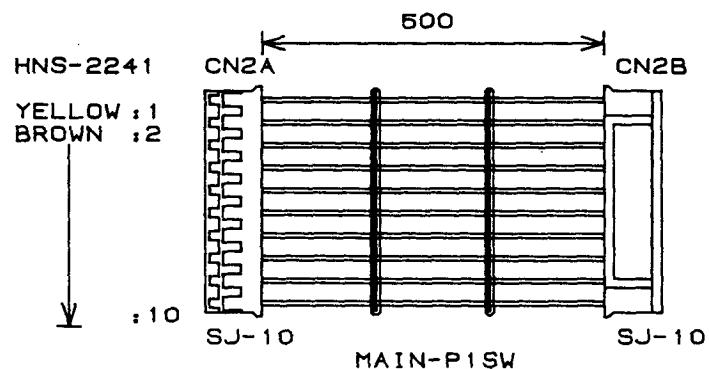

12. DAC - Analog circuit

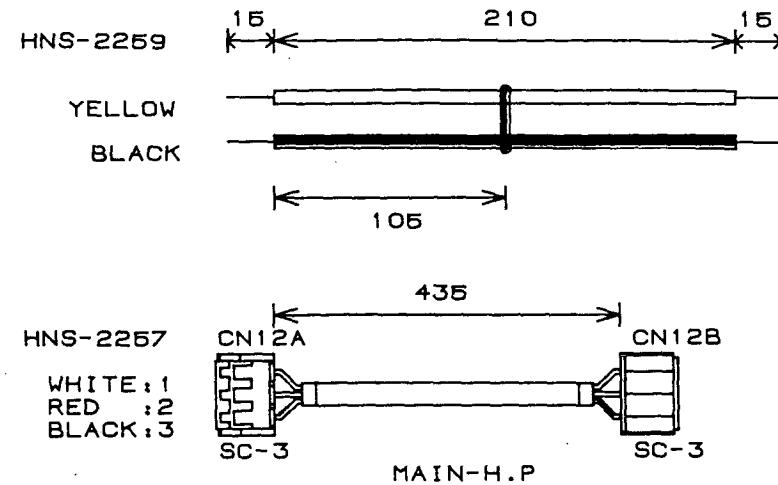

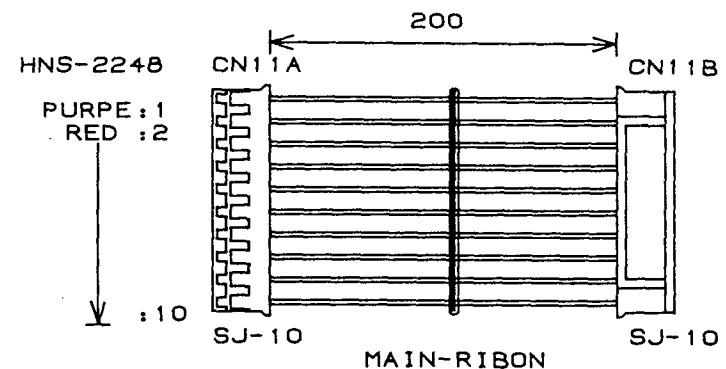

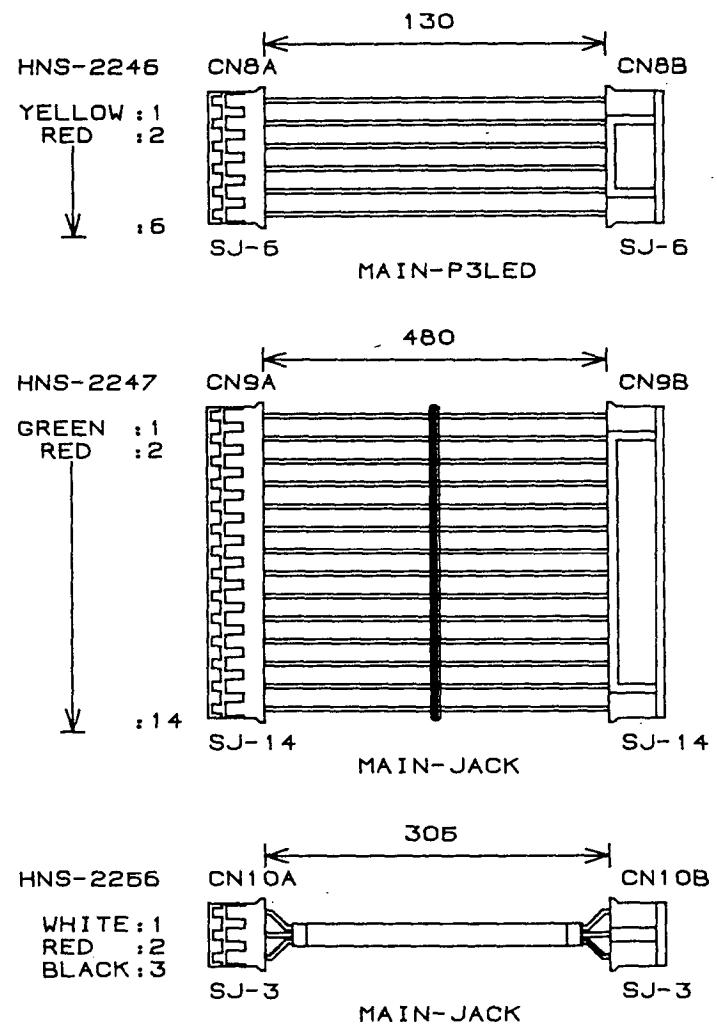

From 7pin(Lch) of IC18
and 7pin(Rch) of IC19
To Analog circuit

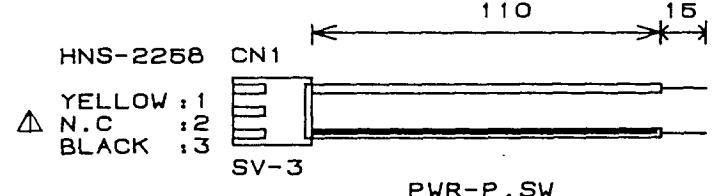

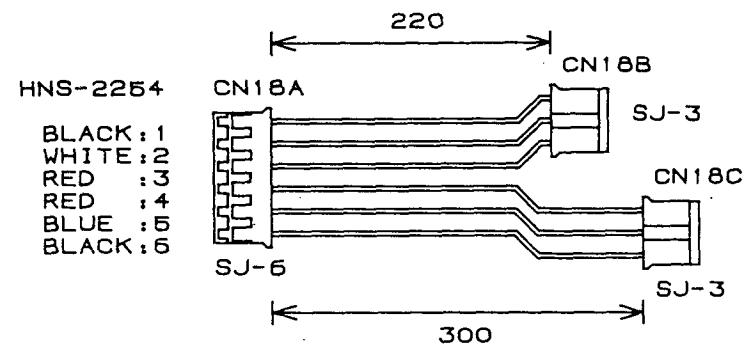

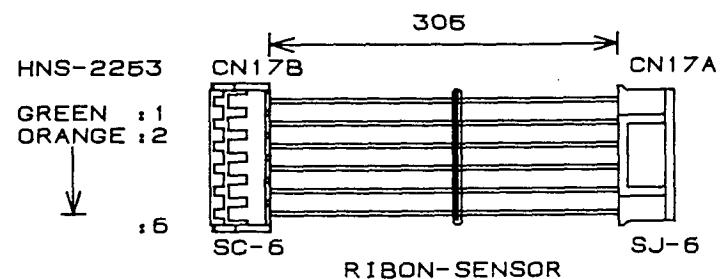

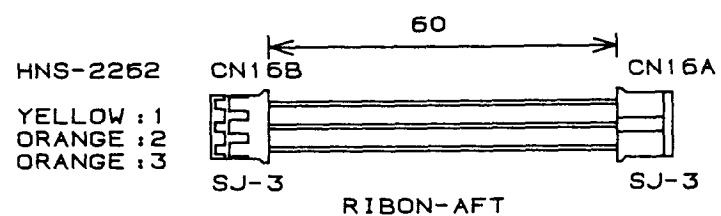

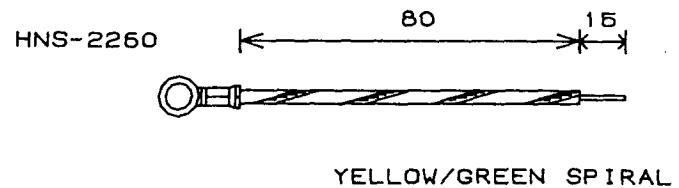

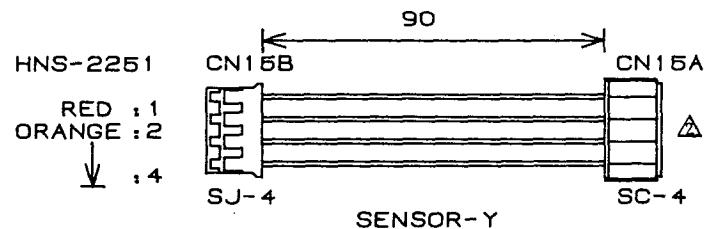

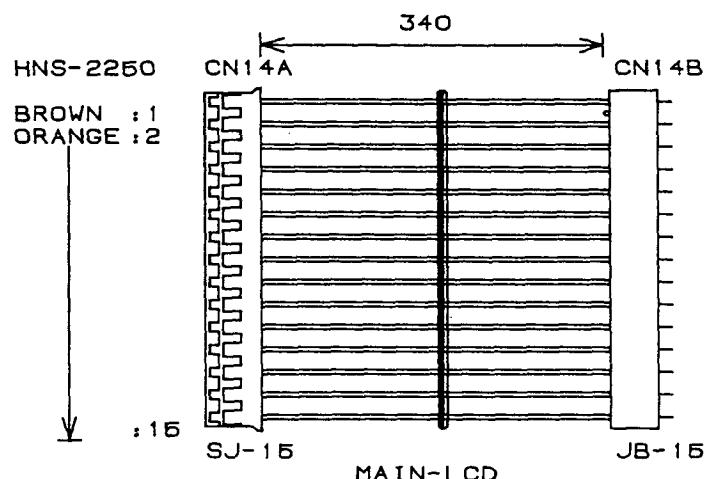

※ When output level test

VAROITUS

Paristo voi räjähtää, jos se on virheellisesti asennettu.
Vaihda paristo ainoastaan laitevalmistajan suosittelemaan
tyyppiin. Hävitä käytetty paristo valmistajan ohjeiden
mukaisesti.

ADVARSEL!

Lithiumbatteri – Eksplorationsfare ved feilaktig handtering.
Udskiftning må kun ske med batteri af samme
fabrikat og type.
Levér det brugte batteri tilbage til leverandør ren.

ADVERSEL

Lithiumbatteri – Eksplorationsfare.
Ved utskifting benyttes kun batteri som
• anbefalt av apparatfabrikanten.
Brukt batteri returneres apparatleverandør ren.

VARNING

Explosionsfara vid felaktigt batteribyte.
Använd samma batterityp eller en ekvivalent typ som
rekommenderas av apparattillverkaren.
Kassera använd batteri enligt fabrikantens instruktion.

CAUTION

Danger of explosion if battery is incorrectly replaced.
Replace only with the same or equivalent type
recommended by the equipment manufacturer
Discard used batteries according to manufacturer's
instructions.
